

AdriaticGo: User Stories & Test Case Decomposition

IT Management - Homework 3

MIT Group 5

March 3, 2026

Persona 1: Nika the Customer (End-User)

Epic 1: Centralized Local Selection

User Story: As a customer, I want to access a single app that lists both major chains and small local boutiques, so that I don't have to check multiple social media pages to find dinner.

- ◇ **Test Case 1.1:** Verify that searching for "Koper Local" displays restaurants that do not have their own standalone websites.
- ◇ **Test Case 1.2:** Confirm the "Order" button remains active for "Facebook-only" partners during their specified operating hours.

Epic 2: Time-Efficiency & Tracking

User Story: As a customer, I want to see the real-time status of my order, so that I can manage my work schedule and know exactly when to meet the courier.

- ◇ **Test Case 2.1:** Verify the status transitions from "Kitchen" to "With Courier" via a push notification.
- ◇ **Test Case 2.2:** Confirm the live map shows the courier's movement.

Epic 3: Frictionless Checkout

User Story: As a customer, I want to pay securely via a saved card, so that I can avoid the hassle of finding cash or calling the restaurant.

- ◇ **Test Case 3.1:** Check that the "Express Checkout" completes the transaction in under three taps.
- ◇ **Test Case 3.2:** Ensure payment error messages provide specific troubleshooting (e.g., "Insufficient Funds") rather than generic errors.

Persona 2: Robert the Local Restaurant Owner (Caterer)

Epic 1: Profit Margin Protection

User Story: As a restaurant owner, I want to see a clear breakdown of platform fees per order, so that I can ensure the service is more affordable than global platforms.

- ◇ **Test Case 1.1:** Verify the "Order Details" view subtracts the commission accurately before showing the "Merchant Net."
- ◇ **Test Case 1.2:** Confirm that daily totals in the dashboard match the sum of individual "Net Payouts."

Epic 2: Operational Streamlining

User Story: As a restaurant owner, I want to receive all digital orders on one screen, so that I can reduce phone call interruptions for my staff.

- ◇ **Test Case 2.1:** Verify that a new order arrival forces the dashboard to "Top" and plays a continuous alert sound until acknowledged.
- ◇ **Test Case 2.2:** Test the "Busy Mode" toggle to see if it correctly increases estimated prep times for all customers.

Epic 3: Hybrid Logistics Support

User Story: As a restaurant owner, I want to request a platform courier only when my own drivers are busy, so that I can handle spikes in demand without hiring more staff.

- ◇ **Test Case 3.1:** Verify the "Assign to AdriaticGo" button is disabled if no platform couriers are within a 5km radius.
- ◇ **Test Case 3.2:** Confirm that the order hand-off to a platform courier triggers a separate status update for the end-user.

Persona 3: Oscar the Student Courier (Delivery Partner)

Epic 1: Earnings Transparency

User Story: As a student courier, I want to see my earnings and bonuses updated instantly after each delivery, so that I can track my income toward my weekly goals.

- ◇ **Test Case 1.1:** Verify the "Earnings Today" counter updates immediately after the "Delivered" swipe action.
- ◇ **Test Case 1.2:** Check that the bonus multiplier is visible on the "Accept Order" screen before the courier commits.

Epic 2: Navigation Precision

User Story: As a student courier, I want to receive exact coordinates and building codes in the app, so that I can avoid calling customers for directions.

- ◇ **Test Case 2.1:** Verify that clicking the address opens the integrated navigation with the "Exact Pin" (not just the street address).
- ◇ **Test Case 2.2:** Confirm that building entry codes are displayed in high-contrast text on the delivery screen.

Epic 3: Schedule Flexibility

User Story: As a student courier, I want to toggle my status to "Offline" instantly, so that I can stop receiving orders as soon as my university classes start.

- ◇ **Test Case 3.1:** Ensure that the "Offline" switch cannot be toggled while a delivery is currently in progress.
- ◇ **Test Case 3.2:** Confirm that no new order requests are sent to a courier who has been offline for more than 1 second.
